CORE STACK

- SQL, Python, pandas, dbt
- Looker, Tableau, Power BI
- Amplitude, Mixpanel, GA4
- BigQuery, Snowflake, PostgreSQL
- Airflow, GitHub Actions, Docker
- basic Terraform and cost tags

METHODS

- A/B testing and guardrails
- cohort and funnel analysis
- retention modelling
- stakeholder interviews
- KPI design and data contracts
- survey analysis and tagging
- dashboard governance

IMPACT SIGNALS

- 420k monthly learners supported
- 17 experiments analysed
- 60 KPI definitions catalogued
- weekly reporting time cut by 8 hours
- four roadmap decisions backed by analysis

CERTIFICATIONS

- dbt Fundamentals, 2023
- Google Analytics IQ, 2022
- Tableau Desktop Specialist, 2021
- GDPR analytics training

LANGUAGES

- Spanish native
- English C1
- German B2
- Portuguese A2

INTERESTS

- ethical product analytics
- education technology
- experimentation culture
- accessible data storytelling

PROJECT THEMES

- churn and activation
- metric lineage
- product onboarding
- marketplace supply and demand

TARGET ROLES

- product data analyst
- BI analyst
- junior analytics engineer
- growth analyst

MAYA RODRIGUEZ

Product Data Analyst | Experimentation, BI, Growth Analytics

Berlin, Germany | maya.rodriguez@example.com | +49 170 555 0142

linkedin.com/in/maya-rodriguez-data | github.com/mayarodriguez

PROFILE

Product data analyst with 6 years of experience turning customer behaviour, funnel data, and product experiments into roadmap decisions for B2B SaaS and marketplace products. Works across analytics engineering, stakeholder discovery, dashboard governance, and statistical analysis; strongest in experiment design, metric definition, and decision-ready reporting.

EXPERIENCE

Senior Product Data Analyst | Northstar Learning GmbH | Jan 2023 - Present

- Owns product analytics for a learning platform used by 420k monthly active learners across DACH and Benelux markets.
- Built dbt models and Looker dashboards for activation, completion, subscription conversion, cancellation reasons, and learning outcomes; reduced weekly reporting by roughly 8 hours.
- Designed and analysed 17 experiments including onboarding personalisation, course recommendation ranking, pricing-page copy, and reminder timing; defined guardrail metrics and readout templates.
- Combined cancellation survey themes with event data to identify onboarding friction and guide two roadmap changes for new learner cohorts.

Product Analyst | MarketFleet AG | Jul 2020 - Dec 2022

- Analysed seller performance, search ranking experiments, logistics delays, and stockouts using SQL, Python notebooks, and Tableau.
- Created a seller health score combining late-shipment risk, support-ticket volume, listing quality, and conversion trends for weekly operations reviews.
- Defined North Star and input metrics for marketplace reliability and seller activation with PMs, support leads, and operations teams.

Analytics Intern | BlueOrbit Travel | Sep 2018 - Jun 2020

- Cleaned booking datasets, automated Excel and SQL reports, and built first Power BI dashboards for channel performance and cancellation cohorts.
- Partnered with customer support to tag recurring refund themes and turn raw comments into a monthly product-quality summary.

SELECTED ANALYTICS WORK

- Retention Early Warning Model | Python, pandas, scikit-learn, Snowflake | 2024 - churn-risk model for trial users with false-positive notes and Looker monitoring view.
- Open Product Metrics Catalog | dbt, YAML, Looker | 2023 - metric definitions, owners, SQL lineage, dashboard links, and review cadence for 60 recurring KPIs.
- Experiment Readout Template | Amplitude, Notion | 2023 - reusable decision log for hypothesis, sample size, guardrails, result, and follow-up action.
- Accessibility Dashboard Review | Tableau, WCAG notes | 2022 - reduced colour-only status cues and rewrote labels for non-technical stakeholders.

EDUCATION AND DEVELOPMENT

- M.Sc. Data Science for Business, HTW Berlin | 2018 - 2020 | thesis on trust signals in two-sided marketplaces using clickstream and support labels, grade 1.4.
- B.A. Business Administration and Information Systems, Universidad Carlos III de Madrid | 2014 - 2018 | exchange semester at University of Groningen.
- Recent coursework: applied statistics, machine learning, data warehousing, behavioural economics, privacy-aware analytics, stakeholder interviewing, and dashboard design.

COLLABORATION CONTEXT

- Regular partner for PM, UX research, lifecycle marketing, customer success, and operations teams; comfortable translating ambiguous product questions into measurable events and dashboards.
- Facilitates metric-review sessions, documents assumptions, and flags when experiment readouts are underpowered or confounded by campaign timing.
- Looks for junior data analyst, product analyst, BI analyst, and analytics engineering roles where product sense and clear communication matter.

ADDITIONAL EVIDENCE

- Runs monthly analytics office hours for PMs and customer-success leads; reviews tracking gaps, experiment readouts, and interpretation risks before roadmap planning.
- Introduced dashboard ownership notes covering metric definition, data source, refresh cadence, audience, and known caveats so non-technical readers can trust recurring reports.
- Mentors two junior analysts on SQL review habits, notebook reproducibility, chart choice, and how to write concise insight summaries for product stakeholders.
- Presented a lightweight experimentation checklist at an internal product day, focusing on sample-size warnings, guardrail metrics, and when not to over-interpret early results.
