PROFILE

Cloud security engineer with 8 years across fintech and health-tech infrastructure. Combines AWS and Azure platform work, incident response, identity governance, container security, developer enablement, and audit evidence for staff-level cloud security roles. Known for turning messy platform risk into repeatable guardrails, practical runbooks, and developer-friendly secure defaults.

PROFESSIONAL EXPERIENCE

Cloud Security Engineer | FinPay Europe, Amsterdam | Mar 2022 - Present

- Leads cloud security improvements across 38 AWS accounts and 11 Kubernetes clusters supporting payment-risk, billing, and reconciliation services.
- Built Terraform modules for IAM boundaries, encrypted S3 logging, GuardDuty routing, account baselines, and reusable alerting; reduced policy drift found during quarterly reviews.
- Rolled out secret scanning, dependency-risk checks, and SAST quality gates in GitLab CI; wrote developer guidance that reduced noisy escalations and repeat exceptions.
- Coordinated response to leaked staging API token; rotated credentials, added detection logic, and published a post-incident runbook for product squads.

DevOps Engineer | CareLoop Health, Utrecht | Aug 2019 - Feb 2022

- Maintained Azure Kubernetes Service clusters, deployment pipelines, Helm charts, and Grafana dashboards for patient intake and scheduling applications.
- Partnered with compliance and engineering to document data-flow diagrams, backup tests, retention controls, and ISO 27001 audit evidence.
- Improved on-call runbooks and deployment rollback notes after two high-severity production incidents; coached newer engineers through incident reviews.

Software Engineer | Atlas Retail Systems, Rotterdam | Sep 2016 - Jul 2019

- Built Java and TypeScript services for inventory planning; added API tests, logging improvements, Linux deployment scripts, and database maintenance jobs.
- Became local owner for dependency updates and vulnerability triage after joining the platform reliability group.

PROJECTS AND ENABLEMENT

- Cloud Access Review Toolkit | Python, AWS IAM, Neo4j | 2024 - maps cross-account roles, detects unused high-risk permissions, and exports review packets for account owners.
- Kubernetes Admission Policy Baseline | OPA Gatekeeper, Helm, GitLab CI | 2023 - policy-as-code checks for privileged pods, hostPath mounts, resource limits, approved registries, and exceptions.
- Security Champions Workshop | internal training | 2022 - threat-modelling exercises, dependency-risk examples, and secret-handling labs for product teams.

AUDIT, RISK AND MENTORSHIP

- Prepared ISO 27001 evidence packets, cloud-control mappings, risk acceptance notes, and account-owner review checklists for compliance and engineering leads.
- Volunteers as mentor for local secure-coding meetup; occasional speaker on cloud IAM pitfalls, incident writeups, and practical least-privilege reviews.
- Looking for cloud security engineer, platform security engineer, DevSecOps engineer, or security automation roles with hands-on ownership.

EDUCATION

B.Sc. Computer Science, Delft University of Technology | 2012 - 2016 | minor in Information Security; capstone on anomaly detection for web access logs using Python and PostgreSQL.

SELECTED EVIDENCE PACKETS

- Prepared quarterly cloud access review summaries with account owner sign-off, service-risk notes, exception expiry dates, and follow-up tickets for high-risk permissions.
- Documented incident review templates that capture timeline, affected services, customer impact, detection gap, preventive control, and runbook owner.
- Maintains practical examples for engineers on safe secret handling, least-privilege IAM
- Keeps a small home lab for IAM graph experiments, Kubernetes policy testing, and reproducible security automation demos.

Keywords: AWS, Azure, IAM, Kubernetes, Terraform, DevSecOps, incident response, ISO 27001

SECURITY STACK

- AWS, Azure, Kubernetes, Docker
- Terraform, Helm, Linux, Nginx
- IAM, SSO, OAuth2/OIDC
- vulnerability management
- threat modelling
- SIEM and incident response
- SAST and dependency scanning
- secrets management

AUTOMATION AND DATA

- Python, Go, Bash, TypeScript
- GitLab CI, GitHub Actions, Jenkins
- Prometheus, Grafana, Datadog
- PostgreSQL, log queries, CSV review packs

CERTIFICATIONS

- AWS Certified Security - Specialty, 2024
- Certified Kubernetes Security Specialist, 2023
- Azure Security Engineer Associate, 2021
- CompTIA Security+, 2018

LANGUAGES

- English C2
- Dutch B2
- Mandarin B1
- German A2

OPERATING STYLE

- writes concise runbooks
- pairs with product engineers
- favours secure defaults over tickets
- explains risk in plain language

INTERESTS

- cloud IAM graph analysis
- practical incident retrospectives
- secure developer tooling
- privacy-preserving telemetry

ROLE FAMILIES

- cloud security engineer
- platform security engineer
- DevSecOps engineer
- security automation engineer

CURRENT FOCUS

- AWS account vending and baselines
- IAM graph reviews and approvals
- Kubernetes policy rollouts
- developer security documentation
